

Spring 2015 Message from Jim Hammill

Hi Folks,

Another spring season has begun and the solar azimuth (angle of the sun) is improving every single day. This means higher efficiency use of solar to help keep your units charged up while you use them.

I have been talking to several Roadtrek owners in the last few weeks through the Roadtreking.com lifestyle blog, and the folks who have begun using solar are having easy start-ups with no battery worries.

This is what our lifestyle is all about. Worry free traveling and pure enjoyment.

I have been thinking hard about this and to celebrate spring, I am offering up a free SOLAR Panel, charge controller and installation, a \$2,730 value, to anybody who buys a Roadtrek before April 30th. This includes factory orders.

Now of course, many of the Roadtreks currently in our dealer stock already have a factory installed solar package. So we will give buyers a \$2000-dollar credit towards their units if they already exist on the Roadtrek.

I encourage you to use this incentive as a great reason to purchase now, or to just get out to see all the great new and unique units that Roadtrek has to offer.

There is a great new lifestyle waiting for you. You can gain insight and talk to other owners at Roadtreking.com.

We welcome any and all questions at sales@roadtrek.com.

Your Destination Awaits
